## Books

**A Criminologist's Guide to R: Crime by the Numbers.** *Chapman & Hall/CRC The R Series*

This book introduces the programming language R and is meant for undergrads or graduate students studying criminology. R is a programming language that is well-suited to the type of work

frequently done in criminology - taking messy data and turning it into useful information. While R is a useful tool for many fields of study, this book focuses on the skills criminologists should know and uses crime data for the example data sets.

### **Uniform Crime Reporting (UCR) Program Data: An Opinionated Guide to FBI Data**

This book provides a guide to UCR data, including National Incident-Based Reporting System (NIBRS) data, for people who want to use it for research or reporting. It covers basic details such as how many years of data are available and which variables are included, as well as goes into the reliability of the data and how to avoid common pitfalls when using the data. It tries to explain to readers both how to use the data, and how to *use it well*.
